Art Unit: 2824

DETAILED ACTION

Priority

1. If applicant desires priority under 35 U.S.C. 121 based upon a previously filed application, specific reference to the earlier filed application must be made in the instant application. For benefit claims under 35 U.S.C. 120, 121 or 365(c), the reference must include the relationship (i.e., continuation, divisional, or continuation-in-part) of the applications. This should appear as the first sentence of the specification following the title, preferably as a separate paragraph unless it appears in an application data sheet. The status of nonprovisional parent application(s) (whether patented or abandoned) should also be included. If a parent application has become a patent, the expression "now Patent No. ______" should follow the filing date of the parent application. If a parent application has become abandoned, the expression "now abandoned" should follow the filing date of the parent application.

Specification

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 31-35 are rejected under 35 U.S.C. 102(e) as being anticipated by Kunikiyo (US Patent 6,380,578). Kunikiyo disclose a cup-shaped element (6)defining an interior volume and a core(18a) located in the interior volume and separated from but surrounded by a first wall of the cup-shaped element, one end of the core facing a second wall of the cup- shaped element, wherein said second wall is transverse to and connected to said first wall (see figure 1). With respect to claim 32, Kunikiyo disclose an electrode (14a) separated from each of the core and the cup-shaped element, the electrode facing another end of the core (see figure 1). With respect to claim 33, Kunikiyo disclose the electrode and the cup shaped element substantially enclose the core (see figure 1). With respect to claim 34, Kunikiyo disclose a semiconductor

Art Unit: 2824

material between the core and the electrode(34) (see figure 28). With respect to claim 35, Kunikiyo disclose a dielectric (12 and 13) between the core and the cup-shaped element (figure 1).

5. Claims 31,32 and 52 are rejected under 35 U.S.C. 102(e) as being anticipated by Van Buskirk et al. (US Patent 6,346,741). Van Buskirk et al. disclose a cup-shaped element (30) defining an interior volume, and a core (34) located in the interior volume and separated from but surrounded by a first wall of the cup-shaped element (30), one end of the core facing a second wall of the cup- shaped element, wherein said second wall is transverse to and connected to said first wall (see figure 1h). With respect to claim 32, Van Buskirk et al. disclose an electrode (44) separated from each of the core and the cup-shaped element, the electrode facing another end of the core (see figure 1h). With respect to claim 52, Van Buskirk et al. disclose a ferroelectric material (32) (see column 14 lines 10 and 11).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bradley K Smith whose telephone number is (571) 272-1884. The examiner can normally be reached on 10-6 Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Elms can be reached on (571) 272-1869. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
